# Podium Documentation

*Release 0.1*

**Russell Keith-Magee**

**Aug 20, 2020**

---

## Contents

---

<b>1</b>	<b>Quickstart</b>	<b>3</b>
1.1	Problems under Ubuntu/Debian . . . . .	3
1.2	Problems under Windows . . . . .	3
<b>2</b>	<b>Documentation</b>	<b>5</b>
<b>3</b>	<b>Community</b>	<b>7</b>
3.1	Contributing to Podium . . . . .	7
3.2	Podium Roadmap . . . . .	8
3.3	Release History . . . . .	8
<b>4</b>	<b>Indices and tables</b>	<b>9</b>

A presentation tool for developers.

In your virtualenv, install Podium, and then run it:

```
$ pip install podium
$ podium
```

This will pop up a GUI window.

## 1.1 Problems under Ubuntu/Debian

Debian and Ubuntu's packaging of Python omits the `idlelib` library from its base package. If you're using Python 2.7 on Ubuntu 13.04, you can install `idlelib` by running:

```
$ sudo apt-get install idle-python2.7
```

For other versions of Python, Ubuntu and Debian, you'll need to adjust this as appropriate.

## 1.2 Problems under Windows

If you're running Podium in a virtualenv, you'll need to set an environment variable so that Podium can find the TCL graphics library:

```
$ set TCL_LIBRARY=c:\Python27\tcl\tcl8.5
```

You'll need to adjust the exact path to reflect your local Python install. You may find it helpful to put this line in the `activate.bat` script for your virtual environment so that it is automatically set whenever the virtualenv is activated.

## CHAPTER 2

---

### Documentation

---

Documentation for Podium can be found on [Read The Docs](#).

Podium is part of the [BeeWare suite](#). You can talk to the community through:

- [@pybeeware](#) on Twitter
- The [BeeWare Gitter channel](#), for discussing the development of new features in the BeeWare suite, and ideas for new tools for the suite and questions about how to use the BeeWare suite.

Contents:

## 3.1 Contributing to Podium

If you experience problems with Podium, [log them on GitHub](#). If you want to contribute code, please [fork the code](#) and [submit a pull request](#).

### 3.1.1 Setting up your development environment

#### Install prerequisites

Podium requires [Toga](#) (A Python native, OS native GUI toolkit). Follow the instructions to install [Toga Prerequisites](#) for your operating system.

#### Setup virtual environment and install Podium

The recommended way of setting up your development environment for Podium is to create a virtual environment, install Podium in development mode into your virtual environment and start coding. Assuming that you are using [virtualenvwrapper](#), you only have to run:

```
$ git clone https://github.com/beeware/podium.git
$ cd podium
```

(continues on next page)

(continued from previous page)

```
$ mkvirtualenv podium
$ pip install -e .
```

Podium uses `unittest` for its own test suite as well as additional helper modules for testing.

Now you are ready to start hacking! Have fun!

## 3.2 Podium Roadmap

Podium is a new project - we have lots of things that we'd like to do. If you'd like to contribute, providing a patch for one of these features:

- Port to Python 3

## 3.3 Release History

### 3.3.1 0.1.0 - In development

Initial public release.

## CHAPTER 4

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`
